

Data Mining (Graduate)

Assignment # 2

This assignment is due Sunday, June 9 to the myCourses dropbox.

For this assignment, you are to write an annotated bibliography consisting of two papers on one of these topics related to classification or clustering algorithms:

- J48 tree
- Random Forest
- The CART algorithm and Gini index
- Support Vector Machine
- Bagging and Boosting
- Cobweb
- BIRCH algorithm
- Clustering distance measurements (excluding Euclidean distance)
- Ball Tree (with an example)
- Cluster evaluation

Follow the directions on the separate handout “How Do I Write an Annotated Bibliography.” You may work with a partner (team of 2) on this assignment. Be sure your name and email address appear at the top of the annotations.

Not more than 3 individuals or teams will be allowed to select the same topic. I have set up a discussion area in myCourses for you to “claim” your topic. If you see that 3 people or teams have already selected a topic, *you may not* select that same topic.

Name your file “LastName.*” and submit to the dropbox.

I will randomly select students/teams to provide a brief discussion of their findings.
